

Triton® Application Case Study

Use of Triton Vacuum Systems in Tank Cleaning

Triton Vacuum Systems are regularly used to clean Above-Ground Storage Tanks like crude oil tanks, 6-oil tanks, and heavy aromatic fuel oil tanks.

Several different Triton vacuums can be used in tank cleaning

service. Our very small and portable T500 system features an on-board 10 bbl tank that can collect product and then pressure it off. We produce a “Tank Cleaning Package” that features at its heart the T500 system, and that also can include a 6” or 8” trash pump and a 4” diaphragm pump. The Tank Cleaning Package thus allows liquids or sludges to be pumped from the tank, and the diaphragm pump can remove rainwater or water bottoms.

The T2500 diesel-powered unit mounted on a trailer is the workhorse in tank cleaning. It is every bit as powerful as any industrial vacuum mounted on any truck, anywhere. Triton Vacuums can also be used

in conjunction with our patented Kraken system to continuously pump off the suctioned product to another storage tank, an open-top rolloff, or other remote location.

Triton Vacuum Systems are low cost, highly portable, and easy-to-operate. They are available in skid or trailer format, and driven by an electric motor or a diesel engine. Contact Triton at 225-637-3700 for more information.
