

*Triton® Application Case Study***Use of the “Kraken”® for Tank Bottoms Removal**

Our customers have used the Triton vacuum and Kraken system to pump “non-pumpable” products through hard piping more than half a mile. Products pumped with this system include 6-oil and Bunker C fuels, tank bottoms, weathered oil from the BP Deepwater Horizon spill, and other products ranging from peanut butter consistency to thick concrete mix to wet drill cuttings.

Solids up to 2” can pass without problem. Quite often, large solids are reduced down as they pass through the system.

Rates up to 12,000-14,000 gallons per hour are possible.

Contact Triton at 225-637-3700 for more information.
